

Testimonials

We tried ProOne ACA Cutting Oil on our three story Friggi Saw cutting 3' rounds of titanium and immediately noticed that the AMP gauge dropped 12% and the saw ran smoother. We were so impressed that we now use ProOne products in every saw operation in our plant. ProOne reduced cutting time and we also see much longer blade life which is a great savings.

Paul W, Full line aluminum and titanium forging supplier, Paramount, CA

In a controlled test with four different school buses over a four month period, we achieved an 8.2% improvement in fuel economy. All four buses showed an increase in MPG, and one of them increased by 17.5%.

Jon K., School district, NV

After trying everything else, we were going to rebuild an Ingersoll 185 that was overheating. We tried ProOne Oil Stabilizer and it cooled down right away, ran quieter and has been back in the field for over 6 months!

Joe V, Heavy duty equipment rental company, Foothill Ranch, CA

We use ProOne's Industrial Oil Concentrate in our anodizing process as a release agent from the die. Combined with hot nose grease, the finish is greatly improved and it eliminates black markings from the extruded aluminum, which reduces our waste. One of our fork lifts was going to be rebuilt at a cost of \$3000.00. We tried ProOne's Oil Stabilizer and it no longer smokes or leaks oil and does not require rebuilding. Excellent product!

Frank F., Aluminum extrusion manufacturer, Paramount, CA

We use the EP-2 Multi-Purpose Grease on our water cutting operations, jet ball screws and nuts for drive systems, metal cutting saws and overhead cranes. It eliminated problems that have been occurring with water and debris from the systems. The results in the day to day longevity of the equipment and lasting wearability are outstanding.

Larry C., Supplier of metal bar, tubing and plate, Lynnwood, CA

Our gear boxes were running hot and noisy. With ProOne Industrial Oil Concentrate they cooled right away and the noise was gone! We then tried the product in our air compressors and got the same great results. We now use ProOne cutting fluids, greases, and spray lubricants religiously. This green technology works better than anything we've seen in 30 years and stops problems from occurring.

Steve K., Metal stamping and tool & die manufacturer, Harbor City, CA

In the past a set of roll threading dies that cost us \$160.00 would last 60,000 parts. Using ProOne Industrial Oil Concentrate we just finished running 500,000 pcs. on ONE set of dies. Add to this the cost of down time to change dies and to get 7 times the amount of tool life here and the total savings is very significant to our standard piece price.

John S., Manufacturer of fasteners, Chicago, IL

In a real comparison test on our CNC's we found ProOne Bio-Stable Water Soluble Cutting Fluid to have superior lubricating properties. It improved surface finishes, gave enhanced tool life and great sump life, and was easy on hands and eyes.

Frank B., Tool and die manufacturer, Machesney Park, IL

ProOne's EP-1 Grease and Oil Concentrate were applied to a large motor and pump that was vibrating and running hot. When the products were applied, within minutes both heat and vibration were diminishing rapidly.

Large copper mine, Bingham Canyon, UT

After trying ProOne products for over a year, one of the West Coast's largest canning operations switched the entire plant's operations over to ProOne.

San Joaquin Valley, CA

The hanger doors closed 5 seconds faster, but the real noticeable difference was how much quieter the wheels & gears ran. The speed is probably more of an improvement than many might realize on something that heavy and slow.

Stacy G., Houston, TX

Testimonials

I have been testing several products from a Company called "Pro One". I will save our company time and \$\$'s with these products. The diesel fuel we grew up with is gone – it had more than 500 ppm of sulfur in it. The "new and improved" diesel today has less than 15 ppm. This means that the diesel today has basically no lubrication qualities to it and its ability to retard the growth of bacteria is also basically gone. Pro One Fuel Maximizer has proven itself to be a great product in fighting these issues. We have spent in excess of \$15K in the Anaheim location alone on fuel related issues in the past 6 months or so... and zero on the test units I have been running the Pro One in.

The ProOne EP-2 grease is the best grease I have found in 30 years. And SOS lab reports from CAT prove up to a 50% drop in wear metals on a consistent basis in my last year of testing the oil additives in diesel applications..

Russ S., General Services Manager for a leading concrete cutting & excavating company, Anaheim, CA

After adding a 15% mix ratio of ProOne's Industrial Oil Concentrate to our present oil we ended up running the entire job out without changing the slotting blade at all. We went from 1,000 pcs per blade to 10,000 pcs per blade.

David N., Custom fastener manufacturing company, Winona, MN

We added ProOne Industrial Oil Concentrate to an integral gear box that was running hot. Once it was in the box it runs as good as new.

Doug H., Diversified global manufacturer of industrial products, Hayward, CA

I just tried using the sample ProOne' XPL-101 Penetrating oil you gave me, and was elated to find it is NOT just another 'wonder-oil' --one wonders when it is going to work? I had tried for 5-min.to get the clean-nut screwed on a rusty engine bolt, but could only progress about a half-thread thereon. To my total amazement, with ProOne the nut immediately not only screwed-on using my fingers, but it turned on the formerly rusty-threads the full-length as though on ball-bearings. Seriously, it's just astounding!!! — I think it needs to be renamed/re-labeled "MagicStuff-101"

Robert V., San Diego, CA

ProOne EP-2 Grease was added to the most extreme ride in the park in a test. When the ride was torn down at the end of the season for maintenance, there was absolutely zero wear. After a complete evaluation, they are now switching over to ProOne throughout the park.

Theme park, Northern California

I've tried many greases and we have now used ProOne greases for over a year and had real good luck with it. We put the first sample on a loader where we had problems with the bucket pins. We were greasing every 4 hours but with ProOne we didn't grease it for a week. We got good input coming back from our foremen to our operators and we're now using it in every piece we've got. We've switched over solely to ProOne on everything because it's worked really well for us.

Red A., Shop Supervisor for excavating and construction company, Motion Traverse City, MI

A sanitation district had a centrifuge that normally operated at 160 degrees move to 172 degrees. After adding ProOne EP-2 Grease they saw the temperature drop to 140 degrees overnight. They now use ProOne products for gear boxes and hydraulic equipment.

Sanitation district, Northern California

The main thing I noticed right away is the increased tool life. The machines are working easier and lots of saved time and energy. I have tried many cutting fluids and lubricants, including special formulations. None compare to ProOne products for cutting, milling, boring, tapping and threading. My shop uses Water Soluble Cutting Fluid, ACA Cutting Oil, EP-2 Grease and Hydraulic Treatment in our presses.

Leo G., Precision machining and manufacturing, Huntington Beach, CA

In a Citizen M-16 CNC Machining Center that completes several operations, tool life for the gun drilling operation went from 2 days to a full week and for the turning operation went from 2 days to 2 weeks! On the roll threading operation, we normally rolled 50 parts and with ProOne Industrial Oil Concentrate added we obtained over 100 parts.
